Dear Mr. Klepitsch:

Revere hereby requests the following minor revision to our Part A Application for Interim Status under the RCRA and also the Agency's permission to store a category of hazardous waste not included in our original Part A application.

At the time of submission of our Part A application, Revere had made arrangements with a reclaimer for the distillation and reuse of a hazardous organic solvent (1,1,1-trichloroethane). The volume of solvent used at that time made it possible that the accumulated solvent could be shipped within 90 days and therefore be exempt from the reporting requirement as allowed in paragraph 262.34 of the RCRA.

It is now apparent that due to general economic and market conditions, the manufacturing processes where Revere used the solvent will have to be curtailed and the rate at which waste solvent will be accumulated will not permit us to achieve the necessary quantity of solvent within 90 days to allow economically viable transportation and recovery costs.

We therefore request that the Agency permit us to revise our Part A application to include the storage of the hazardous waste listed below, not in quantities larger than originally intended, but merely for periods of longer than 90 days.
